

Effects of BioElectric Shield on Human Audio Resonance Patterns (September 1994)

A pioneer in sound healing, Sharry Edwards, MEd., offered to test 3 of her patients without a shield, and then after wearing a shield for only 5 minutes.

Results: All three of their voice patterns went into "perfect resonance" after only 5 minutes. In this line of healing, perfect resonance is an indication of health in the body.

Discussion: Dr. Edwards stated this was "unheard of, and most impressive, demonstrating the balancing and strengthening effect the Shield has on the human body".

About Sound Acoustics

Nearly thirty years of development by Sharry Edwards has shown that every muscle, compound, process and structure of the body has a Frequency Equivalent™ that can be mathematically calculated. The body is a predictable math matrix. This provides the foundation for the concept that the body's ability to heal itself can originate as frequency interactions between the molecular signals of the entire body. When these patterns become discordant, dis-ease is the result.

Human BioAcoustic Vocal Profiling can be used to determine which nutrient frequencies are required by the body.

Human BioAcoustics can be shown to be efficient as a predictive measurement for athletes, body builders and sports enthusiasts to identify the frequencies for the muscles that are too weak or too strong. Human BioAcoustics can help identify a potential muscle injury before it occurs; keeping players off the bench!

Sensitive persons often experience symptoms before conventional lab tests reveal an actual problem. BioAcoustic evaluations have been able to provide information, which can allow the well practitioner and client to manage the approaching disease process before it becomes established.
